

# ChangeBASE

The fastest, easiest way to ensure application readiness for Windows platforms, web browsers and virtualized environments.

The IT infrastructure is rapidly evolving to accommodate an increasingly mobile workforce and a wave of new devices, form factors and platforms. Your end users also expect instant access to the applications they need to be productive. But when it's time to upgrade, apply patches and service packs, or adopt new deployment techniques like virtualization, the challenge of testing and fixing all those applications to avoid risks can be enormous. In fact, application compatibility issues present the biggest hurdle to achieving timely and complete migrations to Windows 7/8, Windows Server 2008/2012, Internet Explorer 8-10, Mozilla Firefox, and virtual desktop and application environments like Microsoft App-V and VMware ThinApp. Even when you

discover issues, manual remediation can take hours or days for each application, require highly skilled, costly IT staff – and still be prone to human error.

Now you can practically eliminate application migration risk with the fastest possible compatibility assessments across your desktop, server, virtual and web application estate. ChangeBASE automates testing, remediation, and packaging as well as virtualization conversion to accelerate application readiness.

Rely on ChangeBASE to find and fix compatibility issues in minutes, and get the reports you need to better manage your application's lifecycle.

Once the applications are ready, ChangeBASE also enables you to automatically virtualize your applications.

"The ChangeBASE solution has saved us 50% of our projected costs, and it has taken half the time it would have...if we had done the application analysis and remediation manually."

*Jim Barton,  
Senior Architect,  
Telefonica UK*

#### Benefits:

- Faster migrations that are on-time and under budget
- Improved quality assurance with lower ongoing application management costs
- Reduced risk of stalled migrations and rising OS support costs

## System requirements

### Supported platforms

#### OS compatibility

Windows XP SP2 or later  
Windows Vista SP2  
Windows 7 32- and 64- bit  
Windows 8  
Windows Server 2003,  
2008 R2, 2012

#### Microsoft Office

Microsoft Office 2007-2010

#### Application Virtualization Compatibility

Microsoft App-V  
VMware ThinApp  
Citrix XenApp  
Symantec SWV

#### Virtual Desktop Compatibility

Citrix XenDesktop  
Microsoft RDS

#### Virtual Desktop Hosting

VMware Workstation  
VMware Server  
Microsoft Hyper-V

#### Browser Compatibility

Mozilla Firefox  
Internet Explorer 8-10

For details about server hardware/  
software requirements, client/server  
installation and other prerequisites,

## Compatibility

ChangeBASE singularly automates compatibility testing across multiple platforms and technologies in a single assessment exercise. There is no need to install applications to test. ChangeBASE automatically imports any application file format, converts it to a standardized Windows Installer format (MSI), then does a comprehensive assessment. ChangeBASE also assesses an organization's diverse mix of technologies.

### Microsoft Office dependency assessment

ChangeBASE identifies Office-dependant applications that may fail after a migration.

### Application virtualization assessment

ChangeBASE allows you to compare compatibility ratings for virtual application solutions to see which ones are the best fit for the organization.

### Virtual desktop and RDS assessment

ChangeBASE assesses compatibility for virtual, server hosted and fat clients in one pass.

### Browser assessment

ChangeBASE detects web application compatibility issues with Windows 7/8 and IE8-10 by checking files and pages that a user might visit.

### Auto-fix of remediation issues

ChangeBASE applies auto-fixes on multiple applications, accelerating application delivery.

## Ongoing application readiness

### Monthly Windows patch readiness

ChangeBASE integrates the latest Windows updates and patches through periodic automated evaluations, to strengthen security and reduce deployment times.

### Automated application packaging

ChangeBASE packaging/virtualization delivery tests for in-house and packaging (MSI) standards issues, and applies automated fixes to ensure compliance. It also develops and customizes QA checks and related remedies for significant time and cost savings. ChangeBASE converts all application formats into Windows installer packages, then allows you to edit them with a built-in tool to create production-ready MSIs.

### Automated application virtualization package creation

ChangeBASE automatically virtualizes applications into the format of your choice, saving time and reducing errors.

## Reporting

ChangeBASE dashboards present graphs, charts, calculators, project status and next-step wizards.

## About Dell

Dell Inc. (NASDAQ: DELL) listens to customers and delivers worldwide innovative technology, business solutions and services they trust and value. For more information, visit [www.dell.com](http://www.dell.com).
